# Case Study: A Privately Held U.S. Bank

**Turning an Aging Platform Into a Secure, Resilient Business Asset, With a Clear Path to Microsoft 365**

## Executive Summary

A privately held U.S. bank's on-premises SharePoint had become a drag on productivity and a source of audit risk. Employees worked around it, access was hard to trace, and an outage could cost a full business day. The bank partnered with Teton Cloud to turn it into a secure, reliable platform its people rely on. Recovery time fell by 75%, access became audit-ready, and leadership now has a clear, low-risk path to Microsoft 365.

**75%**
Faster Recovery - A Full Workday to Under 2 Hrs

**37**
Business Sites Secured & Audit-Ready

**1-CLICK**
Access to Office Files

**M365**
Cloud Roadmap - Aligned to Microsoft Strategy

## Reduced Risk

- **Audit-Ready Access:** Every permission is now traceable, closing data-exposure and compliance gaps.
- **Business Continuity:** Recovery from an outage cut from a full workday to under two hours.
- **Safer Change:** Updates are proven before they reach the business, lowering outage risk.

## Business Value

- **Productivity Restored:** Employees work in SharePoint again, not around it through email and file shares.
- **Information Found Faster:** Staff find what they need across every department in less time.
- **Lighter IT Load:** Problems are caught before employees feel them, easing pressure on IT.
- **Future-Ready Investment:** A roadmap to SharePoint Online aligned with the bank's Microsoft Entra ID and Power BI plans

## Strategic Drivers

- ☑ Reduce audit and data-exposure risk
- ☑ Strengthen business continuity
- ☑ Raise employee productivity
- ☑ Ease the cost and burden of IT support
- ☑ Align the platform with the bank's Microsoft 365 strategy

> *The bank's SharePoint had become something staff worked around, not in. Teton Cloud made it secure, resilient and productive, and gave leadership a clear path to Microsoft 365.*
